

**CaresAccess is a hosted, web based application for managing the information flow and reporting needs for a Project Access Community.**

CaresAccess gives you the information needed to efficiently and effectively manage your Project Access work flow and intelligently generate reports showing how Project Access is benefiting your community. Our application includes modules to collect patient demographic information, determine eligibility, print ID cards, manage physician pledges and patient referrals.

## What You Get

- CaresAccess application
- Secure hosting of your data
- Outsourced IT services
- Server hosting, troubleshooting and maintenance
- Daily backups of your data
- Automatic application upgrades
- Report development and management

## Benefits

- The web based approach enables you to enroll and access patient information from a variety of sites.
- User friendly layout increases speed of completing of common tasks.
- Your community has to invest nothing in the way of server hardware, server maintenance, or IT staff. IT frustration eliminated!
- Automatic updates are real time and included for all communities. There is no need to wait months or years for the next version to become available. As new features are added, your community will see them instantly.

## Security

The CaresAccess application is fully HIPAA compliant. We utilize 128 bit encryption for all transmission of patient information, and require strong passwords for login.

There are several user access levels allowing you to set which users can view or edit different modules.

## Setup and Training

The community setup process includes database setup for a Community, Data Importation into the database (i.e. from existing system or excel files, etc...), User Account Setup, Security Role Setup, initial phone consultations and training with key staff.

Both initial and ongoing training packages are available. Training sessions are customized to meet the needs of your community's users.

## Reporting

One of the primary benefits of the CaresAccess system is the easy access to web reporting, the ability to transform the web reports into a variety of formats (excel, .pdf, etc..), and the ability to have custom reports created for your community as the need arises. There are over 50 reports that are pre-programmed into the CaresAccess application.

## Customization

The ability to customize CaresAccess is built into the application. Additional features (forms, reports, and data fields) can be added to meet the specific needs of your community.

## Cost

We are happy to provide you with a community specific price quote including the initial setup, annual subscription plan, data conversion, support and training.

## Customer Service

The team at Software Integrity is committed to providing you with the support needed to make your community successful in using CaresAccess. Ongoing support is included as part of your annual subscription fee.

## Technical Information

CaresAccess has been developed using cutting edge web development and database technology. The Web Application and business logic tiers have been created using Microsoft's .NET platform and development tools. The data store for CaresAccess is Microsoft SQL Server.

Each community owns its own data, and a copy of the community's database can be provided at any time.

## Free Trial

Software Integrity offers a free 30 day trial to any customer who wishes to evaluate the CaresAccess Solution. At the end of the 30 days, if you decide that CaresAccess will not meet your needs, you simply walk away with no strings attached. To request a free trial offer, send us an email at info@softwareintegrity.net stating your name and your location. You will be sent a login ID within 48 hours in order to begin your evaluation.
